Calcium (microcrystalline hydroxyapatite)

What Is It?
Calcium microcrystalline hydroxyapatite (MCHA) is a calcium compound, containing minerals in their natural ratios, as well as residues of matrix, proteins, and glycosaminoglycans.*

Uses For Calcium (MCHA)
Supports Bone Health: Calcium (MCHA) supports bone mineral composition and reduces the risk of osteoporosis.†

†Risk factors for osteoporosis include sex, race, age and inadequate calcium intake. Populations at highest risk for osteoporosis include Caucasian, Asian, and postmenopausal women, and elderly women and men. Adequate calcium intake throughout life is linked to a reduced risk of osteoporosis, as calcium helps to optimize peak bone mass during adolescence and early adulthood in conjunction with exercise and healthy diet. Calcium intake greater than 2,000 mg per day has no further known benefit to bone health.*

What Is The Source?
Pure Encapsulations calcium microcrystalline hydroxyapatite is obtained from pasture-fed, pesticide-free bovine from New Zealand or Australia.

Recommendations
Pure Encapsulations recommends 2-4 capsules per day, in divided doses, with meals.

Are There Any Potential Side Effects Or Precautions?
If pregnant or lactating, or have a history of kidney stones, consult your physician before taking this product.

Are There Any Potential Drug Interactions?
Calcium should be taken separately from certain antibiotics. Consult your physician for more information.

INTRODUCED 1992

Calcium (MCHA)
each vegetable capsule contains 00 calcium (microcrystalline hydroxyapatite) (bovine) .................... 250 mg
2-4 capsules per day, in divided doses, with or between meals.
